AI ADOPTION, DONE RIGHT

Buying AI tools isn't the same as adopting AI.

Most companies spend on AI tools before leadership agrees on what success looks like, before the people expected to use the tools feel ready, and before anyone is named to own the rollout. That gap is where the investment stalls.

THE SITUATION AT LADLE

Ladle is in the middle of a lot of change. A new VP of Technology is stepping in as CTO with a strong push toward AI, replacing a VP who resisted it, while dedicated HR support is leaving the building at the same time. Right now there is no visibility into what Ladle is actually spending on AI and no baseline for where the organization stands, which makes it hard to bring a credible plan to the board. With CEO Todd Gebski pushing for real progress, Ladle needs a plan that holds up through the leadership transition, not one built around whoever happens to be in the CTO seat.

WHERE UNITE FOCUSES

HR Soul's UNITE framework starts by building the visibility Ladle doesn't have yet, then works outward from there.

- **We help you see where you actually stand.**
  We build a real picture of what AI tools are already in use across Ladle, what they cost, and where employees stand on readiness, so decisions stop being guesses.

- **We get your leadership team rowing the same direction.**
  As a new CTO steps in with a very different view of AI than the outgoing VP, we align leadership on what adoption is actually meant to achieve before any new push begins.

- **We build a plan that holds up in the boardroom.**
  We help you put together the kind of ROI story and roadmap that gives the board confidence, not just activity.
